

Criterion 2: Program Curriculum and Teaching-Learning Processes

2.1 Curriculum Design

The curriculum for the CSE program is designed based on the AICTE model curriculum and aligned with the university guidelines. It encompasses foundational courses, core engineering subjects, professional electives, and open electives.

Recent additions to the curriculum include Artificial Intelligence, Data Science, and Blockchain Technology to bridge the industry-academia gap.

2.2 Teaching-Learning Process

The department employs a mix of traditional and modern teaching methodologies:

- Project-Based Learning (PBL): Implemented in courses like Software Engineering and Web Development.
- Flipped Classroom: Used for advanced programming courses.
- ICT Tools: Extensive use of smart boards, LMS (Moodle), and video lectures (NPTEL, Coursera).

2.3 Assessment Methods

Continuous Internal Evaluation (CIE) accounts for 30% of the total marks, comprising mid-term exams, assignments, and mini-projects. The Semester End Examination (SEE) accounts for 70%.

2.4 Industry Interaction

Guest lectures by industry experts are organized monthly. The department has MOUs with TCS, Infosys, and IBM for student internships and faculty training programs.
